VIDEO

Management

An advanced video player includes a cross-channel synchronization mechanism from various systems as well.

- ☑ Smart video recovery system for fast and intuitive viewing of recorded files
- ☑ Downloading recording in a simple and fast way
- ☑ Snapshot button
- ☑ Setting up a new system in an easy and friendly way
- ☑ Smart bandwidth prevention mechanism for opening a number channels in parallel
- ☑ Direct management and control of PTZ cameras (including presets)
- ☑ Alerts window matrix
- ☑ Two-way audio / announcement capability through recording system
- ☑ VMD window matrix (motion detection)

OVERVIEW SOFTWARE CAPABILITIES

Burglary/Intrusion Systems:

- ✓ Connecting a variety of hacking systems.
- ✓ Connection to a wired decoder
- ✓ Full control of hubs including zone neutralization, entry and exit delay, fault
- ✓ Get a full indicator on the system status map, including a full indicator in the system tree
- ✓ Display system status at all times
- ✓ Activate an event if the alarm system is disabled beyond a predefined time
- ✓ The graphic display on the map

LPR system:

- ✓ Complete management of vehicles, including checkpoint control, individual permission level for each visitor

- ✓ Logical control through the software or through the LPR controller
- ✓ The graphic display on the map

Guardian Mobile Application

- ✓ Determine a patrol route for the Genesis guard, including sites, guards, geographical location
- ✓ Generate QR code for scanning by the app upon arrival at the site being tested.
- ✓ GIS map in the app, including the patrol mark on the map and instructions for the guard
- ✓ Distress button
- ✓ Phone call option and call center message

Rules Mechanism:

Flexible system for creating rules; for terms and automated operations in different scenarios

- ✓ Establish a separate schedule for each event
- ✓ Announcement for each event/device separately
- ✓ A snapshot system which enables snapshot at the event, and even before the event (by default)
- ✓ Email server for sending emails at various events, including a snapshot
- ✓ Receiving an incident on a suspicious door (without the need for detectors) by using the "break-in" hub detector

- ✓ Bouncing a camera in a video window during a third-party event includes control of the presetting.
- ✓ Automatically pop-up a video including playback for diagnostic and investigation of the event

Access Control:

- ✓ Full control of controllers without the need for third-party software (depending on system type)
- ✓ User list management, login control system tags
- ✓ Direct management of authorization level and schedule

- ✓ Map indicator graphic on door status: open, closed, alarm, Communication failure
- ✓ Unlock emergency automatic doors
- ✓ IP Intercom management and control - including image bouncing
- ✓ Pop up an image on the system including video, snapshot image, and visitor / licensed image entry
- ✓ The graphic display on the map

Permissions system:

- ✓ Establish a flexible and straightforward hierarchy
- ✓ The separation between an appliance user and an admiring user
- ✓ Schedule management and individual permission level
- ✓ System tree compilation, map, and incoming events
- ✓ Accessory level compilation

Maps:

- ✓ Indicates the status of the systems by unique icons: alarm, detour, communication disconnect, battery fault and more
- ✓ Full operation and control of the various hubs

- ✓ Automatically pop-up map
- ✓ Linking sites to fast switch between the maps
- ✓ Quick indication of site status by marking the link on the map characterized by color to the relevant event
- ✓ Map printing
- ✓ Fast camera opening

Events management:

- ✓ Event management and event handling processes

- ✓ Synchronization of event handling positions
- ✓ Prioritize different events.
- ✓ Creating a proactive/generic event to handle exceptional cases
- ✓ Sending automatic mailing in predefined scenarios.
- ✓ Quick video investigation
- ✓ Relevant map pop-up
- ✓ Building a simulation or initiating event including running all related rules the same event/component in the software - for testing the response of the hotline on the site.

Report Server:

- ✓ WEB Report Server
- ✓ Creating different sections by times, event type, free text and more
- ✓ Option to get "First entry report -Last exit" of employees for payroll system
- ✓ No need for individual installation; connect with the appropriate permission from any computer in the organization

General:

- ✓ Cyber-networking and real-time discovery of cyber hacking
- ✓ Ability to work on distributed servers including WatchDog mechanism
- ✓ Special mechanism for communication management in low-bandwidth networks
- ✓ Transfer device / detector to Pause-Active / Not Active mode
